Dear Bill:

I have reviewed the C & D Recycling Cable Casing Removal Plan submitted by Hart Engineers, Inc. for A T & T Nassau Metals Corporation. To reiterate your concerns, DER is also interested in the transportation and final destination of the cable casing materials.

In regards to the actual removal process, I would recommend as an added precaution that the base of the open top trailers be lined with a plastic liner. This would prevent any release of water from the trailer due to precipitation during the removal or prior to the removal resulting in moisture laden cables.

Thank you for the opportunity to review this document. If you have any questions concerning this matter, please feel free to contact me.

Sincerely,

Reno P. Ducceschi

Dear Bill:

I have reviewed the June 3, 1988 submission from AT&T on Nassau Metals Corporation concerning the removal of cable casings from the C & D Recycling site.

During an on-site meeting on May 23, 1988, Larry Elder satisfactorily addressed my concerns regarding the potential for spillage of water from the open top trailers. The recent submission also addresses this concern along with detailing the fate and transport of the cable casings.

Therefore, this bureau regards the Work Plan to remove cable casings to be satisfactory.

Thank you for the opportunity to review this document. If you have any questions concerning this matter, please feel free to contact me.

Sincerely,

Reno P. Ducceschi
